TESTA Accessories Tester for Motor Controllers

Our latest addition to the SRS Rigging accessory lineup is **TESTA**, a tool designed for verifying the correct functionality of motor controllers. The DV (Direct Voltage) model checks for the presence and correct sequence of all three phases, while the LV (Low Voltage) version tests the power and control connections.

TESTA is versatile, compatible with various motor controllers and wiring types. It is available with options for Harting multipin connector, Socapex multipin connector, CEE 16/4 connectors, or connectors and wiring type specified by the user.

This tool proves invaluable for dry hire and touring companies, enabling a quick and straightforward functionality check of motor controllers, cables, and fanouts.

Simply connect your device to TESTA to rapidly and efficiently confirm its functionality.

Always make sure to choose **correct wiring type** for your TESTA. When TESTA is connected to the motor controller, **do not leave the controller running in GO mode** for over a minute.

DV (Direct Control**) or LV (**Low Voltage**)**

Available connectors:

- Harting multipin connector
- Socapex multipin connector
- CEE 16/4 connectors
- User specified connectors and wiring type
